

Biodiesel injection system makes biodiesel availability at truck stops a reality
Renewable Energy Group[®], Inc. announces new Retail Biodiesel Blending Program at National Association of Truck Stop Operators conference

(January 29, 2008, Orlando, FL)—When truck drivers fuel up, they often ask “Can I buy biodiesel at this truck stop?”

The nation’s leading biodiesel producer and marketer can now help truck stop operators answer “YES” while increasing their bottom line.

Today at the National Association for Truck Stop Operators conference, Renewable Energy Group, Inc. (REG[®]), the nation’s leading biodiesel producer and marketer, announced a new program to make biodiesel more available across the United States.

The REG[®] Retail Biodiesel Blending Program includes market-proven biodiesel injection equipment paired with a supply agreement for large volumes of high quality biodiesel. Truck stop operators selling large volumes of diesel fuel can significantly increase their profit margins with the REG[®] Retail Biodiesel Blending Program.

“Renewable Energy Group, Inc. is proud to offer a supply program paired with a state-of-the-art biodiesel injection system to give truck stops the opportunity to better serve their customers and increase their profit margins,” said Gary Haer, Vice President of Sales and Marketing for Renewable Energy Group, Inc.

As part of the supply agreement, Renewable Energy Group, Inc. plans to remotely monitor biodiesel tank levels in order to offer customers an automated re-order process. The biodiesel injection system equipment is compatible with all existing infrastructure and allows truck stop operators to remotely adjust biodiesel blend levels on a daily basis based on local economics and diesel prices.

“We believe the REG[®] Retail Biodiesel Blending Program offers a tremendous incentive for truck stops to adopt a biodiesel blend program while ensuring their customers have access to highest quality biodiesel available on the market today,” Haer added.
